WORK EXPERIENCE

Frontend Developer — BUNDLAR, Chicago

Jul 2022-Present
- Developed and maintained front-end features using HTML, CSS and Typescript using the AngularJS framework for our Content Management System (CMS). Including
  - Robust text search functionality by multiple filter fields
  - Several editing tools similar to those in Photoshop, including the ability to duplicate, rename or delete layers and snap-to-grid functionality for precise layout editing
  - Customizable hotkeys
- Collaborated with our UX and product team to refine and scope new designs and features based on technical feasibility
- Headed, planned and completed a refactoring project for global styles throughout our CMS
- Collaborated with the back-end team to help define REST endpoint interfaces
- Implemented end to end testing using Cypress
- Solved bugs in our CMS found by our QA and product teams

Freelance Projects

Microgreen Farm Web App — Front End Technical Lead (6 months)

- Created a microgreen farm app in collaboration with 4 other people using React and Java as part of our front and back end frameworks that communicated with SQL databases.
- The app implemented CRUD on inventory for a microgreen farm and was able to track the timeline of microgreen farm planting with a calendar of events

Asst. Professor at Florida St. — Website Development (3 months)

OTHER WORK EXPERIENCE

Science Teacher — Ferguson-Florissant Schools, Saint Louis

Aug 2017-Aug 2020
- Created content and implemented daily lesson plans for 120+ students
- Coached the technology student association(TSA) after school where 20+ students worked on various STEM themed problems for competition.
- For TSA, built a budget and timeline to work with students on their upcoming competitions. Students successfully placed in state competition and achieved first place in multiple events.
